

Energy Company Saves 25% Annually with Moldex Glide® Foam Earplugs

Problem

A Midwest-based energy company provides hearing protection to over 1,300 daily users. The earplugs they were using however, were uncomfortable and expensive:

- Workers complained their earplugs were uncomfortable and didn't fit right, resulting in misuse and inadequate protection
- Workers went through 3 to 4 pairs of roll-down earplugs daily, leading to high costs and unnecessary waste
- The general discomfort and fit issues of the earplugs bred non-compliance and safety concerns

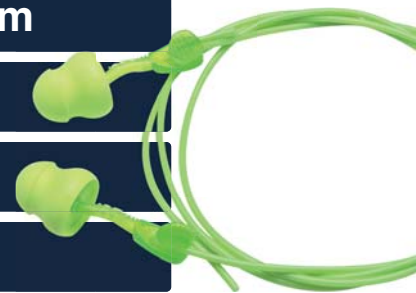

Solution

The company wanted to cut costs, increase compliance and provide workers with greater comfort. Moldex presented its Glide Foam Twist-In Earplugs, which feature:

- A **unique multi-curved stem** which helps the plug to turn its way inside the ear canal for quick, effortless and comfortable fit
- A no roll-down design allows a **single pair of earplugs to last all day**, since workers never have to touch the foam tip
- One of the **highest independently tested NRRs (30dB)** for a no-roll style earplug

Results

- ✓ 25% annual savings on hearing protection program
- ✓ Increased worker comfort and satisfaction
- ✓ Fewer earplugs used
- ✓ Increased compliance and convenience

Major Cost Savings

Less Inventory
