## **Examinetics announces strategic alliance with Moldex-Metric, Inc. to offer nationwide online respirator clearance evaluations**

*Alliance will streamline respiratory protection for workers*

OVERLAND PARK, KS, May 15, 2019 - Examinetics, the leader in mobile occupational health and wellness services, announces a new strategic alliance for online respirator clearance evaluations with Moldex-Metric, a world-class innovative respiratory and hearing protection manufacturer.

Moldex will now offer a nationwide, medically backed respirator clearance program to their customers of reusable and disposable respirators. Workers must be medically evaluated and cleared to wear a respirator in order to be compliant with OSHA regulations. Examinetics offers online respirator medical clearance evaluations to keep workforces healthy, safe and compliant with mandatory workplace laws.

The online respirator clearance from Examinetics perfectly complements Moldex's desire to keep employees safe when wearing respirators in the workplace. The medical evaluation is to be completed prior to fit testing with the Moldex line of personal protective equipment. After employees participate in the online clearance process, results are available immediately and stored on a cloud-based data management system.

"We are thrilled to partner with Examinetics to offer even greater convenience and support services to our customers." Bill Schubach, VP of Sales, Moldex. "Their vast experience and long term commitment to safety and health made them the perfect fit for this partnership. Our customers now have a turnkey solution for ensuring that their written respiratory protection programs are in compliance with OSHA regulations and more importantly, sufficient to keep workers' respiratory health protected while on the job."

Through simple online access, Examinetics' online respirator clearance process is convenient for a large or widely dispersed workforce. The evaluation takes approximately fifteen to twenty minutes to complete with immediate results. Upon completion, the employee and their employer have access to evaluation results on XM Solutions, a secure cloud-based database. If additional follow up is needed, Examinetics' medical staff are available for consultation. Dr. Kent Peterson, M.D., Chief Medical Officer for Examinetics, created the questionnaire process and rules for various clearance levels.

"We are excited to collaborate with Moldex in the area of respiratory protection," said Examinetics Chief Growth Officer Sean West. "With this development, we are working toward our

mission of helping companies stay productive by offering comprehensive programs and analytics that promote the health, safety, compliance, and wellbeing of their entire workforce population.”

In 2018, OSHA ranked respiratory protection as the fourth most frequently cited standards violation on job sites. In total, OSHA found 3,112 respiratory violations across the country. This serves as a reminder of the importance of respiratory protection. As nearly five million Americans work in harmful airborne material every day, the protection of their lungs is of the utmost importance.

Respiratory protection involves the use of a protective face piece, which covers parts of the face (nose and mouth) or the entire head of an individual and protects against airborne agents. Respiratory protection is vital in any work environment with insufficient oxygen or harmful dust, fogs, mists, smoke, sprays or vapors.
