

# Industrial Adhesives Manufacturer Saves 25% Annually with Moldex Special Ops® M2700 Respirators

## Problem

An American industrial adhesives manufacturer provides disposable respiratory protection to its crew, but dusty and dirty conditions were creating challenges for workers and management:

- Respirators quickly appeared dirty due to dust and debris, resulting in masks being thrown away prematurely, driving up the costs of the respiratory protection program
- Workers complained the respirators from other companies were uncomfortable
- Workers took off their masks during breaks and would regularly misplace them, further contributing to excessive waste and respiratory protection program costs

## Solution

The company wanted to cut costs and provide workers with a more comfortable respirator. Moldex presented its M2700 Special Ops disposable respirators, which feature:

- A solid black color and **Dura-Mesh® shell**, which help keep masks cleaner looking longer and reduce premature disposal
- A **Ventex® valve** that lets out hot air faster and allows for easier breathing and comfort
- **Unique molded design** eliminates metal nose clips for greater comfort
- **Patented HandyStrap®** allows respirators to hang freely around workers' necks during breaks, so they're rarely misplaced and always ready to go

## Results

- ✓ **25% annual savings on overall respiratory costs**
- ✓ **Increased worker comfort and satisfaction**
- ✓ **Fewer respirators used – less waste**
- ✓ **Increased compliance**
