

Healthcare Construction Firm Saves Over \$55,000 Annually with Moldex Respirators

Problem

Numerous respiratory protection challenges were plaguing this healthcare construction firm's workers and management:

- Respirators looked dirty due to dust and debris, resulting in masks being thrown away prematurely, driving up the costs of the respiratory protection program
- Workers complained the respirators were uncomfortable
- Concerns regarding worker safety and respiratory compliance were on the rise, since workers were regularly taking them off and misplacing them

Solution

The company wanted to cut costs and provide its workers with greater comfort. Moldex presented its AirWave® 4300 series disposable respirators, which feature:

- A **Dura-Mesh®** shell that protects the filter media so it **looks cleaner longer**
- A **pinch-free nose bridge** that comfortably contours to the bridge of the nose, **eliminating discomfort** and **constant readjustment**
- The **SmartStrap®**, which allows respirators to **hang freely** around workers' necks during breaks, so they're **never misplaced** and always ready to go

Results

- ✓ **\$55,000 in savings on overall respiratory costs**
- ✓ **Increased worker comfort and satisfaction**
- ✓ **Fewer respirators used for less waste**
- ✓ **Increased compliance**
