

Pipe Manufacturer Saves \$5,000 Annually with Moldex Glide® Foam Earplugs

Problem

A southern-based iron and steel pipe manufacturer provides hearing protection to over 1,000 daily users. The earplugs they were using however, were uncomfortable:

- Workers complained their earplugs didn't fit right, resulting in misuse and inadequate protection
- Workers went through 3-4 pairs of roll-down earplugs daily, leading to high costs and unnecessary waste
- The general unpopularity of the earplugs bred non-compliance and safety concerns

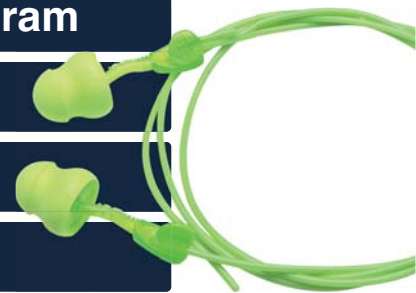

Solution

The manufacturer wanted to cut costs and provide workers with greater comfort. Moldex presented its Glide Foam Twist-In Earplugs, which feature:

- A **unique multi-curved stem** which helps the plug to turn its way inside the ear canal for quick, effortless and comfortable fit
- A **no roll-down design** allows a single pair of earplugs to last all day, since workers never have to touch the foam tip
- One of the **highest independently tested NRRs (30dB)** for a no-roll style earplug

Results

- ✓ \$5,000 annual savings on hearing protection program
- ✓ Increased worker acceptance and satisfaction
- ✓ Fewer earplugs used
- ✓ Increased compliance and convenience

Major Cost Savings

Less Inventory
