

# Pipe Manufacturer Saves \$5,000 Annually with Moldex PlugStation® Earplugs

## Problem

A southern-based iron and steel manufacturer provides hearing protection to over 1,000 daily users, but the environmental conditions were creating challenges for workers and management:

- Workers complained their earplugs were uncomfortable and didn't fit right, resulting in misuse and inadequate protection
- Access to earplugs was inconvenient, leading to non-compliance and safety concerns
- Limited access to earplugs was also contributing to users taking multiple pairs at a time, often with some going unused, creating high costs and excess waste

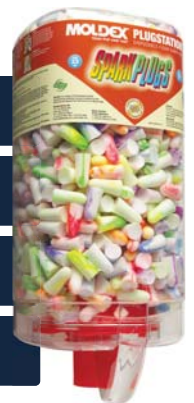

## Solution

The manufacturer wanted to provide workers with a comfortable earplug, cut costs, and establish a more efficient system for disseminating hearing protection. Moldex presented its SparkPlugs® PlugStation, which features:

- Earplugs made out of extra-soft, extra light foam for **extreme comfort**
- The **highest independently tested NRR (33dB)**, making them suitable for the noisiest environments
- Easy hanging anywhere hearing protection is needed, providing **fast, convenient access** to workers
- Workers take one pair of earplugs at a time, helping **eliminate waste and reducing overall costs**

## Results

- ✓ **\$5,000 annual savings on hearing protection program**
- ✓ **Increased worker comfort and satisfaction**
- ✓ **Fewer earplugs used**
- ✓ **Increased compliance and convenience**

Major Cost Savings

Less Inventory
