

# Industrial Farm Equipment Company Saves 10% Annually with Moldex Cap Mounted MX-7 Ear Muffs

## Problem

A Canadian-based industrial farm equipment company provides hearing protection to over 60 daily users. However, management was growing concerned about safety compliance, since workers disliked their current earmuffs:

- Workers complained their earmuffs were uncomfortable, resulting in misuse and inadequate protection
- The current earmuffs wouldn't fit over the hearing aids many of the workers were wearing on the job, forcing them to choose between hearing aids or ear muffs
- Many users felt that the attenuation they were receiving was insufficient

## Solution

The company wanted to cut costs and provide workers with a more comfortable earmuff that attenuated well and fit over worker's hearing aids. Moldex was able to address the company's concerns with its Cap Mounted MX-7 Earmuffs, which feature:

- Extra soft foam low pressure ear cushions that allow for **all day comfort**
- Larger cup openings designed to **fit most ear sizes**, allowing workers to comfortably wear hearing aids under the muffs
- Exclusive waffled cup foam for **independently tested NRR (28 dB) protection** suitable for most noisy environments

## Results

- ✓ **10% Annual savings on hearing protection**
- ✓ **Increased worker comfort and satisfaction**
- ✓ **Dependable high attenuation confirmed by an independent lab**
- ✓ **Increased compliance and a workforce committed to safety**

Major Cost Savings

Less Inventory
