

Industrial Farm Equipment Company Makes Hearing Protection a Priority with Moldex Soothers™

Problem

A Canadian-based industrial farm equipment company provides hearing protection to over 600 daily users, but management was receiving a number of complaints from workers regarding the comfort and safety of their current earplugs:

- Workers complained their earplugs were uncomfortable and difficult to correctly insert, resulting in misuse and inadequate protection
- Some workers reported the current earplugs were contributing to dry ear canal discomfort
- Many users felt that the attenuation they were receiving was insufficient

Solution

The company wanted to provide workers with a more comfortable earplug that delivered the protection they needed. Moldex was able to meet the company's earplug expectations with their one-of-a-kind Soothers moisturizing disposable earplugs, which feature:

- Earplugs made out of special foam, formulated for **softness and comfort** in addition to a smooth outer surface for **easy insertion and fitting**
- A moisturizing solution applied to the foam for a level of **all-day comfort** not previously achieved
- **Independently tested NRR 33 dB** provided the appropriate level of attenuation needed

Results

- ✓ A workforce committed to safety
- ✓ Increased worker comfort and satisfaction
- ✓ Dependable high attenuation confirmed by an independent lab
- ✓ Increased safety compliance
